

*Protecting Your Organisation
Without Inhibiting Your Staff*

PRESS RELEASE

London – March 2009

Emereo Solutions Delivers Forensics At Your Fingertips on Stand L68, Infosecurity Europe, Earls Court 28-30 April 2009

Emereo Solutions, a leading provider of end-point security and data loss prevention solutions, will be demonstrating how the latest version of DriveLock will provide a control centre to unify all IT security aspects; from full disk encryption status to easily interpreted event logs for fast forensic analysis.

DriveLock, developed and authored by CenterTools GmbH and available exclusively in the UK and Ireland through Emereo Solutions, advances core functionality to further secure Windows mobile devices, satisfy compliance and accreditation requirements and close the whole encryption circle for mobile devices, desktops and laptops.

DriveLock Full Disk Encryption (FDE) ensures all data on lost or stolen computers remains confidential. Encryption is transparent so users continue to utilise Windows the way they are used to. DriveLock FDE uses technology recognised as being certified to Common Criteria EAL4 by the National Technical Authority for Information Assurance or CESG and has FIPS 140-2 certified encryption algorithms. Data and files transferred to PDAs and smartphones, running Windows Mobile, is also recognised to allow staff to have truly flexible mobile working. In such instances it is possible to create encrypted containers which ensure a lost mobile device does not become a competitive or personal threat to an organisation, its staff or customers.

Beyond this DriveLock continues to provide complete and granular control over who is allowed to connect what devices to a corporate computer as well as controlling what users can copy to or from these devices. Key to making this a flexible business solution is DriveLock's Network Profiles, a unique feature that enforces different security policies according to the network users are logged onto.

DriveLock has a growing reputation with Emereo's customers due to its capability to enable IT security policies. Recent implementations include Brunner Mond, part of the Tata Group, Saxo Bank and Brodies LLP.

*Protecting Your Organisation
Without Inhibiting Your Staff*

Key to this positive market traction as Emereo's Marketing Director, Andrew Smith, explains is DriveLock's easy and efficient administration that makes enabling an organisation's security policy such a practical reality. "Emereo's job is to protect organisations without inhibiting their staff. Because DriveLock easily integrates with existing IT infrastructure by utilising Group Policies in Microsoft's Active Directory (other network directory services are supported), profiles can be set which don't discriminate against people preferred working practices. The new highly visible management console provides the alerts IT Management need to changing behaviour and access issues that potentially become security breaches. These features help to keep training and support costs low, resulting in a high return on investment (ROI)."

Visitors to stand L68 at Infosecurity Europe will be expected to participate in some very interactive demonstrations and consequently benefit from automatic entry into a daily secure prize-draw for anything from an iPod to a free IT security policy audit.

About Emereo Solutions (UK) Limited

Emereo provides rapidly-deployed software solutions for infrastructure management covering network management and monitoring, network behaviour analysis, end-point security and IT service management. Our solutions help organisations secure greater resilience of their enterprise networks so IT can provide better services to the business and operations it supports. Best-of-Breed products adhere to ITIL and COBIT best practices and ensure compliance with initiatives such as Sarbanes Oxley, FSA, GSI, e-Health and e-Government. The Company's products deliver efficient and effective solutions without prohibitive costs and extended consulting times ordinarily associated with enterprise solutions.

Emereo Solutions (UK) Limited (formerly AdRem Software UK) was founded in 2004 as a privately held company. Its installed base serves a diverse range of customer types base from Central and Local Government, the NHS, Education, Finance Services, Law firms and many more organisations where the goal is making IT effective and available. Emereo's solutions have been deployed on over 15,000 servers across the UK and Ireland. For more information visit: www.emereo.eu
